Power Management

Most organizations support deployments that include a variety of form factors including PC, Mac, iOS, Windows Phone, and Android devices with users who work from the office, home, on the road, and in transit. Let's face it – the standard has become whatever the user needs to perform their work efficiently and well.

For most IT administrators, this means towing the line between operating systems – flipping from one set of applications to another depending on the device, the desired action, and the user profile.

Absolute® Manage can turn this painful reality into a set of simple, automated processes using technology that will allow you to manage all devices from a single console.

Cross-Platform Technology

Absolute Manage delivers authentic cross-platform capabilities. This means there is no need to invest in additional infrastructure. Instead, existing Mac or Windows servers and hardware components can be leveraged to manage either platform (or both).

Intelligent

Track installed applications and licenses, and redeploy underused licenses to maximize your inventory and avoid non-compliance fines. Find, terminate, and remove unlicensed and unauthorized apps and software.

Automated

Automate time-consuming IT processes such as software distribution, patch management, and asset inventory. Notify administrators with automated commands and remediate devices based on predefined conditions.

Cross-Platform

Enjoy ease of use and cross-platform capabilities using a single console to manage all PC, Mac, iOS, Windows Phone, and Android devices in your deployment.

Application & License Management

Track and manage installed applications and licenses on all the devices in your deployment:

- Detect missing applications and remotely install them
- Monitor usage, redeploy under-used applications, and prevent the launch of unauthorized or unlicensed applications
- Mobile Application Management tracks installed apps and provides for silent installation and removal by policy
- Simple application repackaging for Mac and Windows with the InstallEase utility

Security, Change & Configuration Management

Monitor and enforce your configuration policies and use the data to:

- Remotely filter and group systems and configurations based on OS and business function
- Encryption status by device including encryption product, version, status of encryption, and other details
- Manage corporate and government regulatory compliance

For tablet and smart phone devices:

- Impose enterprise level security including automated BYOD device enrolment and employee opt-in
- Policy-based actions automate IT commands and other actions based on predefined conditions. Actions can include turning off roaming, demoting a device to unmanaged status, alerting IT, etc.
- Manage and deploy profiles (configure email, restrict apps, disable cameras)
- Send messages to users

Absolute[®]
MANAGE

Automated Patch Management

Don't rely on end users to prevent viruses, worms, and other security threats from entering your network. Now you can:

- Centrally manage and install patches, tracking and reporting on the patch status of all managed Mac and PC systems
- Once a basic OS is installed, all required updates and patches for the Mac or PC will be automatically added

Computer Imaging

- Use an automated process to install a complete operating system and standard applications on Mac & PC devices
- Deploy a disk image to a Mac while it's in use
- Automatically migrate user folders, network settings, and Directory Access settings so that upon reboot, users will find a new Mac OS with no interruption to productivity

Asset Inventory

- Gather hundreds of hardware and software data points from devices over the network
- Collect detailed information from ultra-portable devices, such as: serial numbers, MAC addresses, installed apps, and telephone numbers
- Export data into various file formats
- Integrate asset information into third party applications such as Microsoft SCCM and Web Help Desk

Power Management

Implementing an energy savings policy will improve your bottom line and conserve the planet's resources:

- Build policies based on user behavior and work schedules
- Assign defaults so the most energy efficient profile is enforced for maximum savings
- Analyze the data to determine your savings and to plan for greater efficiencies in the future

Absolute Manage Mobile Device Management

Mobile device management is included with Absolute Manage. Or it can be purchased as a stand alone product (Absolute Manage MDM). Visit www.absolute.com/mdm for more information.

Absolute[®]

MANAGE

"Absolute Manage has been an invaluable tool for enhancing our efficiency. It simplifies our daily management tasks, lets us to stay one step ahead when it comes to patch management and is critical in allowing us to maintain a lean IT staff without compromising the quality of our service."

Michael Scarpelli

Technical Support Manager
La Jolla Institute for Allergy & Immunology (LIAI)

System Requirements

Servers – Absolute Manage

- Windows[®] XP SP 2 or newer†
- Mac[®] OS X 10.5 or newer‡

Servers – Mobile Device Management

- Windows Server 2003 or 2008, Microsoft Internet Information Services (IIS) 6.0 or newer, ASP.NET 2.0, .NET 3.5
- Mac OS X 10.5 or newer; Property List Editor utility (optional installation package included with Mac OS X developer software)

Admin Consoles

- Windows XP SP2 or newer
- Mac OS X 10.5 or newer, Intel processor

Agents

- Windows XP or newer†
- Mac[®] OS X 10.3.9 or newer‡
- Mac[®] OS X 10.2-10.3.8 (supported with specific Agent versions)

Mobile Client Platforms

- iOS 4.0 or newer; Android 2.2 or newer; Windows Phone 7 or newer
